Quartz gray and bluish gray, gray feldspar, biotite and abundant fengags with trace of faintly green alteration within feldspar masses. May mean late and partial metamorphism. Trace of dense metarhyolite pebbles. Intensely fractured and healed with quartz and black iron stained fines with some indurated and recrystallized gouge. Wide variation in fracture directions but near vertical breaks tend to have hematitic and trace of polished surfaces.
Recovery 95%, clasts 85%, matrix 15%.

128 to 175 - Conglomerate as above but with pebbles of metarhyolite at 128' to 135'.
Recovery 95%, clasts 85%, matrix 15%.

Dear Well Owner:

Enclosed for your records is a copy of the Notice of Intention to drill a well which you recently filed with this Department. This is returned as evidence of your compliance with ARS 45-596. Your driller has been mailed separately a Well Drilling Card, Well Drilling Report form and a Completion Report form.

In the event that you determine it necessary to change the location of the proposed well, you should obtain the written permission of the Department of Water Resources before proceeding with the drilling. A properly signed amended drilling card must be in the possession of the driller before drilling commences at a different location than originally authorized.

ARS 45-600 requires the driller to furnish this Department a complete and accurate log of the well within 30 days after completion of drilling and a Completion Report within 30 days after the installation of pumping equipment. You should insist and ensure that this is done.

For your future use, a Change of Well Information form is enclosed should it become needed. Per ARS 45-593, the person to whom a well is registered shall notify this Department of a change in ownership of the well and/or information pertaining to the physical characteristics of the well in order to keep the well registration file current and accurate.

Very truly yours,

Richard A. Gessner
